

## PATIENT

Angel Anderson

## SPECIES

Canine

## BREED

Boston Terrier

## SEX

Spayed female

## AGE

4 years

## WEIGHT

22 lbs

## INTERPRETED BY

Brad Harris, DVM,  
DACVECC, DACVIM  
(cardiology)

## IMAGING PERFORMED BY

Greg Kuhlman, DVM,  
DAVCIM

## HOSPITAL NAME

Red River Animal  
Emergency Hospital  
and Referral Center

## REFERRING VET

Dr. Kuhlman

## INVOICE

75011

## DATE

4/30/26

## PRESENTING CLINICAL SIGNS

Medications: Gabapentin 100 mg tablets - 1 tablet PO every 8-12 hours for 5-7 days (prescribed 04/05/2026).

## HOLTER MONITOR STUDY

Total Beats: 99436

### Heart rate

Mean: 71

Minimum: 32

Maximum: 257

Predominant Rhythm: Normal sinus rhythm

Supraventricular Events: 0

Bradycardia Events: 30236

### Ventricular Ectopic Events

Ventricular premature complexes: 0

Ventricular premature couplets: 0

Ventricular runs or ventricular tachycardia: 0

## HOLTER MONITOR FINDINGS

**The underlying rhythm is a normal sinus rhythm with 2<sup>nd</sup> degree atrioventricular block noted throughout the recording. There is no ventricular or atrial ectopy noted. The two times that the event button was pressed, the patient was in normal sinus rhythm.**

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

These findings identify a predominantly sinus rhythm in the setting of occasional 2<sup>nd</sup> degree atrioventricular block. AV block can occur in the setting of increased vagal tone (commonly respiratory, gastrointestinal, or neurologic diseases), or may be a manifestation of primary AV nodal degeneration. An echocardiogram and abdominal ultrasound is recommended to further evaluate these underlying causes. In the absence of more significant clinical signs or additional history, no cardiac therapy will be recommended at this time.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
