5/15/26

PRESENTING CLINICAL SIGNS

History: This is a resubmission of ECG for a previously submitted cardio report. It is now submitted as a PDF.

ECG

There is a six-lead ECG available for review. The underlying rhythm is regular at an average rate of 150bpm. The rhythm appears to be sinus in origin with narrow QRS complexes (<70ms). There is no atrial or ventricular ectopy and no conduction delay or block identified. This is most consistent with a normal sinus rhythm.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.

Bradley Harris, DVM, DACVECC, DACVIM (cardiology)
