**IMAGING
PERFORMED BY**

Loetitia Saint-Jacques,
LVT

HOSPITAL NAME

Incline VH

REFERRING VET

Dr. Sovik

INVOICE

78229

DATE

6/1/26

PRESENTING CLINICAL SIGNS

History: recheck ECG as advised by cardiologist- ran in 25mm and 50. Cat has an appointment at Specialty center in Sacramento.

ECG

There is a six-lead ECG with a paper speed of 25 and 50mm/s, 10mm/mV available for review. The underlying rhythm is regular at an average rate of 160bpm. The rhythm appears to be sinus in origin with prolonged QRS complexes (>40ms). A mean electrical axis deviation is noted. There is no atrial or ventricular ectopy. This is most consistent with a normal sinus rhythm with right bundle branch block morphology and a right axis deviation.

ULTRASONOGRAPHIC FINDINGS

A normal sinus rhythm with right bundle branch block is identified. Bundle branch blocks can occur with both cardiac abnormalities (valve disease, cardiomyopathy, neoplasia) as well as extra cardiac causes (hyperkalemia, trauma, etc)

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Complete blood count, serum chemistry and abdominal ultrasound. Consider referral to a veterinary cardiologist for re-evaluation.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
