PRESENTING CLINICAL SIGNS

Hank had a sarcoma removed from his toe about 6 weeks ago. The mass was not known to be sarcoma at the time. This is part of neoplasia screen, planning for amputation of toe
CBC/Chem/UA/T4 are WNL

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

Urinary bladder is moderately distended with anechoic contents. It has normal uniform wall thickness (< 0.2 cm). No masses or cystoliths are observed.

The prostate is normal for a neutered dog.

Left kidney is normal in size (5.9 cm), shape and echogenicity. It has smooth peripheral margination and appropriate corticomedullary distinction. There is no pyelectasia noted. No mineral is observed.

Right kidney is normal in size (6.4 cm), shape and echogenicity. It has smooth peripheral margination and appropriate corticomedullary distinction. There is no pyelectasia noted. No mineral is observed.

Adrenal Glands

Left adrenal gland is normal in size (0.44 cm at cranial pole and 0.56 cm at caudal pole), shape and contour. Corticomedullary structure is unremarkable.

Right adrenal gland is normal in size (0.82 cm at cranial pole and 0.55 cm at caudal pole), shape and contour. Corticomedullary structure is unremarkable.

Spleen

Spleen is subjectively normal in size with normal smooth margins. Parenchyma is normal in echogenicity and echotexture. No focal nodules or masses are observed. Splenic vasculature appears normal.

Liver

Liver is subjectively normal in size. Margins are sharp and smooth. It has normal homogenous echotexture and normal echogenicity. No focal lesions are observed. Visible vasculature appears normal. Gallbladder is mildly distended with anechoic contents. The wall is smooth without visible thickening. There is no evidence of common bile duct dilation.

Gastrointestinal

The visible gastric wall is normal in thickness (canine < 0.5 cm and feline < 0.4 cm). The stomach is empty.

The small intestines are normal in wall thickness and layering. Small intestinal motility appears adequate (1-3 contractions per min). There are no luminal contents noted within small intestines.

PATIENT Colon is normal in wall thickness (< 0.2 cm) and layering.

Hank Pung **Pancreas**

Pancreas has normal homogenous echotexture and is normal in echogenicity and smooth margination. There is no evidence of peripancreatic inflammation.

SPECIES

Canine

Free Abdomen

Lymph nodes are normal with no observed enlargement.

BREED

Shepherd Cross

SEX

Neutered male

ULTRASONOGRAPHIC FINDINGS

Primary Findings

Unremarkable abdomen.

AGE

7 years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Three view thoracic radiographs are recommended if not previously evaluated to further assess for any possible metastatic disease. Otherwise, proceed with surgery as planned.
