

PATIENT

Ash Weinstock

PRESENTING CLINICAL SIGNS

Reason for U/S: Elevated Pre-Anes ALT. - No clinical signs. Current Meds: None
Abnormal PE/Chem/CBC/UA Results: CBC/Chem results: ALT = 165 Urinalysis: Not done

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

BREED

Domestic Shorthair

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The pelvic urethra was imaged 1.0 cm beyond the cystourethral junction. The ureters were not visible which is normal. A trace amount of debris was noted with minor polypoid changes. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

SEX

Female

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilatation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.38 cm. The right kidney measured 3.63 cm.

AGE

8 months

WEIGHT

7.8 lbs

Adrenal Glands

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The left adrenal gland measured 0.35 cm. The right adrenal gland measured 0.31 cm.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Spleen

The **spleen** was at the upper limits of normal at 0.9 cm with uniform parenchyma.

IMAGING PERFORMED BY

Dr. Abdul Chani

Liver

HOSPITAL NAME

Byram Ah

The **liver** revealed slightly increased portal markings with no evidence of significant disease. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident.

REFERRING VET

Dr. Abdul Chani

Gastrointestinal

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Minor gastric stasis was present. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

PATIENT

Pancreas

Ash Weinstock

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

SPECIES

Feline

ULTRASONOGRAPHIC FINDINGS

BREED

Minor, non-specific, inflammatory hepatopathy.

Domestic Shorthair

Minor bladder thickening.

SEX

Female

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

8 months

There was no evidence of significant disease. FNA of the liver could be considered at the time of sedation for further definition and assessment of inflammatory cell type. There is no contraindication to anesthetic procedure.
