

## PATIENT

Brant Merchant

## SPECIES

Canine

## BREED

Blackmouth Cur

## SEX

Neutered male

## AGE

12 years

## WEIGHT

64.8 lbs

## INTERPRETED BY

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

## IMAGING PERFORMED BY

Kathleen Laux

## HOSPITAL NAME

Rondout Valley VA

## REFERRING VET

Dr. Laux

## INVOICE

70031

## DATE

1/12/26

## PRESENTING CLINICAL SIGNS

History: One organ (prostate) recheck ultrasound 3 weeks after FNA of prostate and injection of enrofloxacin into the prostate. Been on oral cefpodoxine for 3 weeks currently.  
Abnormal PE/Chem/CBC/UA Results: Culture grew an E.coli that was resistant to enrofloxacin but susceptible to cefpodoxine.

## ULTRASONOGRAPHIC EXAMINATION

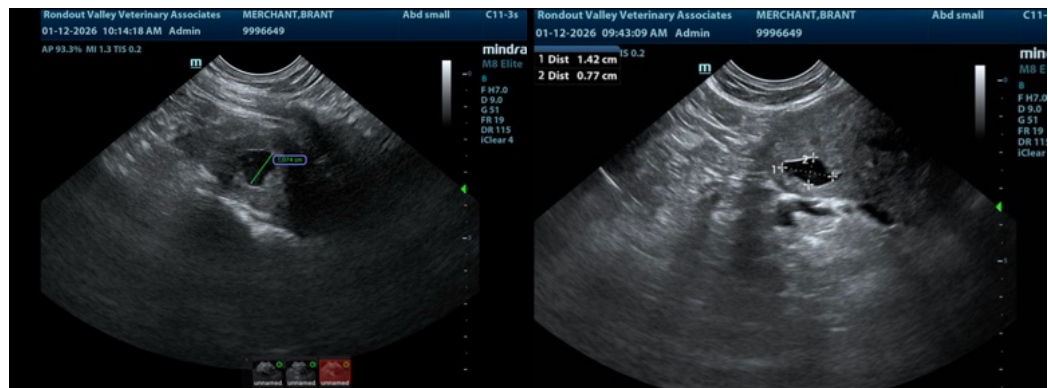

The prostate revealed a residual cyst of 1.4 x 0.77 cm. Minor, heterogenous changes were noted in the prostate. The prostate measured 3.15 cm with minor microcystic changes. There were slight areas of mineralization.

## ULTRASONOGRAPHIC FINDINGS

Minor residual cyst.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

I recommend assessing cytology of the prostate to ensure that underlying carcinoma is not an issue. Combination of Enrofloxacin owing to parenchymal penetration into the prostate and better pharmacodynamics along with ceftiofur injections may be a solid choice if any residual infection is present upon further aspiration of the cyst as the injectable Ceftiofur may allow for better pharmacological penetration into the prostate. Further recheck and therapy would be based on clinical signs.
