

PATIENT

Jaxson Drew

PRESENTING CLINICAL SIGNS

History: lethargic, not eating, ate fabric

SPECIES

Canine

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The pelvic urethra was imaged 2.0 cm beyond the cystourethral junction and appeared normal. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

BREED

Dachshund

SEX

Netuered male

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.58 cm. The left kidney measured 4.36 cm.

AGE

3 years

WEIGHT

17.7 lbs

Adrenal Glands

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland was normal and measured 1.75 x 0.52 cm at the caudal pole and 1.1 cm at the cranial pole. The left adrenal gland measured 1.53 x 0.4 cm at the caudal pole and 0.39 cm at the cranial pole.

INTERPRETED BY

Eric Lindquist, DMV

IMAGING PERFORMED BY

Jenn

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

HOSPITAL NAME

Rockaway

Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

PATIENT

Gastrointestinal

Jaxson Drew

The **stomach** revealed edematous luminal fluid noted. The pylorus was patent. The small intestines and colon were unremarkable.

SPECIES

Canine

Pancreas

The **pancreas** revealed mild, heterogenous parenchymal changes. This is consistent with inflammation. There was no evidence of masses.

BREED

Dachshund

ULTRASONOGRAPHIC FINDINGS

SEX

Gastritis.

Netuered male

Minor pancreatitis pattern.

AGE

3 years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

There was no evidence of pathology.
