

**PATIENT PRESENTING CLINICAL SIGNS**

Reilly Clemens

Reilly is a twelve year old, MN, Wheaten Terrier owned by our technician, Claire. He has a history of Grade III/VI systolic heart murmur, arrhythmia, and CVD. Current medications are pimobendan/spironolactone/ACEI His last echo was 8/21/21 and read by Dr. Machen Lamy. He also had an ECG on 9/14/21 read by Dr. Machen Lamy. This is Reilly's 5 month recheck echo. Blood pressure today measured: 130/72, 128/68, 130/72 ECG is attached as a pdf for your information.

**SPECIES**

Canine

**BREED ULTRASONOGRAPHIC EXAMINATION OF THE HEART**

Soft Coated Wheaten Terrier

The echocardiogram in this patient demonstrated normal **left atrial** size based on 3 separate methods of LA evaluation. The cranial and caudal **mitral** valve leaflets presented normal linear structure, extension in systole, and union in diastole with normal kinesis. The **left ventricle** presented thicknesses with linear contour and was not dilated nor restricted. The **myocardium** presented normal echogenicity without subjective evidence of significant fibrotic or ischemic disease. **Contractility** of the ventricular walls was adequate and in normal range for this patient evidenced by the fractional shortening measurement and subjective evaluation of the different regions of the myocardium. The **left ventricular outflow** tract demonstrated normal laminar flow and subjective structural integrity. The **right atrium** and auricle revealed normal size, structure and content. No evidence of masses was noted. **Tricuspid** valvular assessment demonstrated adequate linear morphology and kinesis. The **right ventricle** was of normal size (1/3 diameter of LV), chordae structure, myocardial echogenicity and thickness. **Pulmonary outflow** tract assessment revealed normal valve structure, laminar flow, and diameter (approx.1:1 pa/ao ratio). No visible **pericardial** or free pleura fluid was noted. The cranial **mediastinum and pericardial and extra-cardiac regions** were free of masses in the visible window.

**SEX**

Neutered male

**AGE**

12 years

**WEIGHT**

54 lbs

**INTERPRETED BY**

Eric Lindquist, DMV DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Dr. Todd

**HOSPITAL NAME**

Lambs Gap AH

**REFERRING VET**

**PATIENT**

Reilly Clemens

**ULTRASONOGRAPHIC FINDINGS**

Stable valvular disease and rhythm.

**SPECIES**

Canine

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No gross arrhythmogenic activity was noted on EKG. The patient appears stable on current protocol. I recommend recheck in 6 months.
