

**PATIENT**

Franklin Cicchetti

**PRESENTING CLINICAL SIGNS**

chronic intermittent diarrhea, no vomiting dilated small intestine and colon on rads

**SPECIES**

Feline

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

**BREED**

Siamese

**SEX**

Spayed Female

The **kidneys** revealed largely normal size and structure, corticomedullary definition and ratio (cortex 1/3 of medulla) were essentially maintained with some age-related loss of curvilinear patterns regarding the capsule and C/M junction. The cortices presented largely uniform texture with some increased echogenicity expected for his age patient. Medullary structure differed distinctly from that of the cortex and no evidence of pelvic dilation was present. The left kidney measured 3.62 cm. The right kidney measured 3.58 cm.

**AGE**

8 Years

**Adrenal Glands**

The regions of the **adrenal glands** were unremarkable.

**WEIGHT**

8.3 Pounds

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**INTERPRETED BY**

Eric Lindquist, DMV

**Liver**

The **liver** presented slight coarse architecture. Minor gallbladder thickening noted. Minor increased portal markings noted. History of cholangitis likely in this patient.

DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Jenn

**Gastrointestinal**

The **stomach** presented a minor amount of chyme. The small intestine and colon were unremarkable.

**HOSPITAL NAME**

Rockaway AH

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**REFERRING VET**

Dr. Maniar

**ULTRASONOGRAPHIC FINDINGS**

- Structurally unremarkable abdomen

**INVOICE**

34986

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Underlying food intolerance or occult structurally insignificant inflammatory bowel. No evidence of significant disease.
