

PATIENT PRESENTING CLINICAL SIGNS

Toby Clavell Recheck doing well at home prev u/s on 12/28- chronic pancreatitis mild gastritis mild age related kidneys mild benign hepatomegaly mildly prominent bilateral adrenals

SPECIES

Canine

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

BREED

Yorkie

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

SEX

Neutered male

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.53 cm. The left kidney measured 3.67 cm.

AGE

11 years

WEIGHT

11 lbs

Adrenal Glands

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The left adrenal gland measured 1.64 x 0.61 cm at the caudal pole and 0.66 cm at the cranial pole. The right adrenal gland measured 1.6 x 0.67 cm at the caudal pole and 0.71 cm at the cranial pole.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Spleen

IMAGING PERFORMED BY

Jenn

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

HOSPITAL NAME

Rockaway AH

Liver

REFERRING VET

Dr. Maniar

The **liver** was coarse in architecture. The gallbladder and common bile duct were unremarkable.

INVOICE

95485

Gastrointestinal

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

DATE

1/25/22

PATIENT

Pancreas

Toby Clavell

The **pancreas** revealed mild heterogenous changes. This is consistent with remodeling, yet there was no evidence of active inflammation.

SPECIES

Canine

ULTRASONOGRAPHIC FINDINGS

Pancreatic remodeling, appears stable.

BREED

Yorkie

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SEX

Supportive outpatient management should prove effective in this patient. Dietary intolerance may be an underlying issue. No significant residual disease.
