

**PATIENT**

Trunks Oliver

**PRESENTING CLINICAL SIGNS**

History: Metallic FB in stomach. Suspect drawstring from pants  
Abnormal PE/Chem/CBC/UA Results: Pending

**SPECIES**

Feline

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

**BREED**

Siamese

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

**SEX**

Male

**AGE**

14 weeks

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.52 cm. The right kidney measured 3.69 cm.

**WEIGHT**

4.5 lbs

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The left adrenal gland measured 0.28 cm.

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Dr. Rodriguez

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

**HOSPITAL NAME**

Foxfield VS

**REFERRING VET**

Dr. Rodriguez

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**DATE**

10/20/21

**PATIENT**

Trunks Oliver

**Gastrointestinal**

A linear metallic foreign body was noted in the **stomach** and measured 1.1 cm. A shadowing structure was noted in the pylorus and measured 1.0 cm. Chyme was noted prior to the structure.

**SPECIES**

Feline

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**BREED**

Siamese

**SEX**

Male

**ULTRASONOGRAPHIC FINDINGS**

Pyloric foreign body and separate linear structure. Obstructive pattern was noted.

**AGE**

14 weeks

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Monitoring for any vomitus may include these structures is recommended prior to surgery. Ideally, rapid view prior to surgery would be warranted to ensure that this structure has not moved.
