NORMAL PARAMETER	50-100	0.7-1.7	0.7-1.6	BELOW	BELOW	BELOW	BELOW
PATIENT					3.2	2.36	

**Cardiac Presentation**

The echocardiogram for this patient presented excessive **left atrial size** expressed both in the LA/AO and LA max measurements Chamber volumes and echogenicity were normal. The cranial and caudal **mitral** valve leaflets presented vegetative thickening consistent with endocardiosis. Doppler indicated measurable insufficiency. The **left ventricle** presented thicknesses with linear contour and was not dilated nor restricted. The **myocardium** presented normal echogenicity without subjective evidence of significant fibrotic or ischemic disease. **Contractility** of the ventricular walls was adequate and in normal range for this patient evidenced by the fractional shortening measurement and subjective evaluation of the different regions of the myocardium. The **left ventricular outflow** tract demonstrated normal laminar flow and subjective structural integrity. The **right atrium** and auricle revealed normal size, structure and content. No evidence of masses was noted or chamber overload. **Tricuspid** valvular assessment demonstrated adequate linear morphology. The **right ventricle** was of normal size (1/3 diameter of LV), chordae structure, myocardial echogenicity and thickness. **Pulmonic** tract assessment revealed normal valve structure, laminar flow, and diameter (approx.1:1 pa/ao ratio). No visible **pericardial** or free pleura fluid was noted. No echographically detectable evidence of infiltrative disease was visible. The cranial **mediastinum and pericardial regions** were free of masses in the visible window.

Dr. Maniar

**ULTRASONOGRAPHIC FINDINGS**

- Advanced Stage B2 valvular disease

**INVOICE**

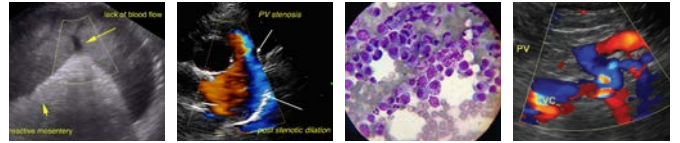

42262

**DATE**

10/21/22

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Given the patient history and echo findings, recommend enhancing cardiac therapy, maintaining Pimobendan at 0.3 mg/kg BID, maximizing ACE inhibitor AT 0.5 mg/kg SID progressing to BID, adding Spironolactone at 1.2 mg/kg BID, and reassessment of the clinical signs. Blood pressures, EKG, BUN/Creatinine should be monitored. Recheck echo in 3-6 months, earlier if clinical signs worsen.
