

PATIENT PRESENTING CLINICAL SIGNS

Baci Bahor History: recheck from yesterday foreign material seen

SPECIES ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Canine **Urinary System**

BREED The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

Coton De Tulear

SEX

Neutered male The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.85 cm. The right kidney measured 3.35 cm.

AGE

1 year

WEIGHT Adrenal Glands

8.8 lbs Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The left adrenal gland measured 1.32 x 0.32 cm at the caudal pole and 0.36 cm at the cranial pole. The right adrenal gland measured 1.91 x 0.88 cm at the cranial pole and 0.37 cm at the caudal pole.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Jenn

HOSPITAL NAME

Rockaway AH

REFERRING VET Liver

Dr. Maniar The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

PATIENT *Gastrointestinal*

Baci Bahor Shadowing material was persistently present in the pylorus and measured 2.0 cm. This material is partially obstructive. The small intestine and colon were unremarkable.

SPECIES

Canine *Pancreas*

BREED

Coton De Tulear

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

SEX

Neutered male

ULTRASONOGRAPHIC FINDINGS

2.0 cm partially obstructive foreign matter in the stomach.

AGE

1 year

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

If the oral medication history does not match the size of the structure and the patient was n.p.o. at the time of the sonogram then endoscopy or gastrotomy would be indicated if clinical signs are persistent.
