

**PATIENT**

Boots Stevens

**SPECIES**

Feline

**BREED**

Domestic Longhair

**SEX**

Spayed female

**AGE**

8 years

**WEIGHT**

4.78 kg

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Dr. Gardner

**HOSPITAL NAME**

Wilvet Salem

**REFERRING VET**

Dr. Gardner

**INVOICE**

39897

**DATE**

10/5/22

**PRESENTING CLINICAL SIGNS**

History: P had single episode of bloody vomit this AM. normal for p to vomit food in the morning per o. P has no teeth. Was feral when o got p approx 3 years ago. No environmental/diet change. No known toxins. e/d normal. p did eat a lot of grass after incident this am. u/d normal. Indoor/Outdoor

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.0 cm.

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. Both adrenal glands measured 0.4 cm.

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**PATIENT**

**Gastrointestinal**

Boots Stevens

The **stomach** revealed a fluid filled lumen with minor, excessive gastric gas. The small intestines and colon were unremarkable other than a minor excessive gas and hyperperistalsis.

**SPECIES**

Feline

**Pancreas**

**BREED**

Domestic Longhair

The left limb of the **pancreas** was hypoechoic and irregular with regional inflammation. The region measured 1.5 x 2.0 cm.

**SEX**

Spayed female

Gastritis.

Left limb pancreatitis.

**AGE**

8 years

**ULTRASONOGRAPHIC FINDINGS**

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

A clinical trial of the following may prove effective. Left cranial subxiphoid palpation is warranted to assess for discomfort. There is no evidence of neoplasia or foreign bodies.
