

**PATIENT**

Italus Valle

**PRESENTING CLINICAL SIGNS**

History: suspect intestinal fb

**SPECIES**

Feline

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

**BREED**

Sphynx

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

**SEX**

Male

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. Both kidneys measured 3.5 cm.

**AGE**

7 months

**Adrenal Glands**

**WEIGHT**

4.5 lbs

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**Spleen**

The **spleen** in this patient was uniform, yet volume contracted. Hydration status should be assessed.

**IMAGING PERFORMED BY**

Jenn

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**HOSPITAL NAME**

Rockaway AH

**REFERRING VET**

Dr. Kahn

**Gastrointestinal**

**INVOICE**

42263

The upper **gastrointestinal tract** revealed dilated lumen with chyme followed by empty small intestine. This created an obstructive pattern. The exact cause of the obstructive pattern is unclear.

**DATE**

11/1/22

**PATIENT**

**Pancreas**

Italus Valle

The **pancreas** was hypoechoic and irregular with undulating contour. This is consistent with pancreatitis.

**SPECIES**

Feline

**ULTRASONOGRAPHIC FINDINGS**

Obstructive GI pattern.

**BREED**

Volume contracted spleen.

Sphynx

Pancreatitis pattern.

**SEX**

Male

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Hydration therapy and exploratory surgery is indicated.
