

PATIENT PRESENTING CLINICAL SIGNS

Bell Sanchez History: Possible FB based on rads.

SPECIES ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Canine *Urinary System*

BREED The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

Poodle Mix

SEX

Spayed Female

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.87 cm. The right kidney measured 3.94 cm.

AGE

4 years

WEIGHT

12.6 lbs

Adrenal Glands

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 1.59 x 1.04 cm at the cranial pole and 0.66 cm at the caudal pole. The left adrenal gland measured 1.83 x 0.41 cm at the cranial pole and 0.38 cm at the caudal pole.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Shari Reffi, CVT

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted. The spleen measured 1.07 cm.

REFERRING VET

Dr. Maniar

Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

PATIENT

Bell Sanchez

Gastrointestinal

The **stomach** was empty. Minor mucosal hypertrophy was noted in the pylorus. There was no evidence of a foreign body. The remainder of the intestinal tract was unremarkable.

SPECIES

Canine

Pancreas

Regional inflammation was noted around the pancreas with ill-defined, hyperechoic changes. The changes were relatively mild.

BREED

Poodle Mix

SEX

Spayed Female

ULTRASONOGRAPHIC FINDINGS

Empty gastrointestinal tract.

Minor pyloric hypertrophy.

Minor regional inflammation around the pylorus and pancreas.

AGE

4 years

WEIGHT

12.6 lbs

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Supportive care should prove effective.
