

**PATIENT**

Dee Dee Horowitz

**SPECIES**

Feline

**BREED**

Siamese

**SEX**

Spayed Female

**AGE**

10 years

**WEIGHT**

11.2 lbs

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Dr. Abdul Chani

**HOSPITAL NAME**

Byram AH

**REFERRING VET**

Dr. Cruz

**INVOICE**

94535

**DATE**

12/14/21

**PRESENTING CLINICAL SIGNS**

History: R/O Abdominal neoplasia / other Pet is anorexic and lethargic Current Meds : None  
Abnormal PE/Chem/CBC/UA Results: CBC = mild neutrophilia Creat = 2.5 ; all else WNL Urinalysis = not done Urine S.G. = not done

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

The **kidneys** revealed largely normal size and structure, corticomedullary definition and ratio (cortex 1/3 of medulla) were essentially maintained with some age-related loss of curvilinear patterns regarding the capsule and C/M junction. The cortices presented largely uniform texture with some increased echogenicity expected for this age patient. Medullary structure differed distinctly from that of the cortex. The right kidney measured 3.73 cm. The left kidney measured 3.49 cm with trace pyelectasia.

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 0.26 cm.

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

**Liver**

The **liver** revealed a slightly echogenic gallbladder wall with uniform parenchyma. Slight coarse architecture was noted in the liver. This is expected for this age patient. History of cholangitis is likely.

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine

**PATIENT**

Dee Dee Horowitz

demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**SPECIES**

Feline

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**BREED**

Siamese

**ULTRASONOGRAPHIC FINDINGS**

**SEX**

Spayed Female

Structurally unremarkable abdomen.

**AGE**

10 years

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

There was no evidence of significant disease. There was no obvious evidence of neoplasia. Supportive care is warranted. Assessment is recommended for other cause of anorexia and lethargy such as orthopedic, CNS or thoracic disease.
