

<b>PATIENT</b>	<b>PRESENTING CLINICAL SIGNS</b>
Calypso Sheridan	gastritis, pancreatitis, IVDD
<b>SPECIES</b>	<b>ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN</b>
Canine	<b>Urinary System</b>
<b>BREED</b>	The <b>urinary bladder</b> , trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.
Chihuahua	The <b>kidneys</b> revealed largely normal size and structure, corticomedullary definition and ratio (cortex 1/3 of medulla) were essentially maintained with some age-related loss of curvilinear patterns regarding the capsule and C/M junction. The cortices presented largely uniform texture with some increased echogenicity expected for his age patient. Medullary structure differed distinctly from that of the cortex and no evidence of pelvic dilation was present. The left kidney measured 3.52 cm. The right kidney measured 3.26 cm.
<b>SEX</b>	<b>Adrenal Glands</b>
Neutered Male	Both <b>adrenal glands</b> were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 1.43 cm x 0.53 cm at the caudal pole and 0.59 cm at the cranial pole. The left adrenal gland measured 1.32 cm x 0.44 cm at the caudal pole and 0.47 cm at the cranial pole.
<b>AGE</b>	<b>Spleen</b>
13 Years	The <b>spleen</b> presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.
<b>WEIGHT</b>	<b>Liver</b>
10.4 Pounds	The <b>liver</b> images from right and left intercostal as well as subcostal views revealed subjectively normal liver size, contour, and structure. Some age-related parenchymal remodeling was noted but likely not clinically significant at this time. Vascular and biliary tracts were of normal volume and no evidence of congestion was noted. The gallbladder presented some dependent debris with essentially normal contour. The cystic and common bile ducts were normal. No overt evidence of active inflammatory, infiltrative or regenerative pathology was noted but should be paired with current or past LE elevations regarding any clinical significance to this presentation. The hepatic lymph nodes were unremarkable.
<b>INTERPRETED BY</b>	<b>Gastrointestinal</b>
Eric Lindquist, DMV DABVP, Cert. IVUSS	Minor fluid filled <b>gastric</b> lumen present. The small intestine and colon were unremarkable.
<b>IMAGING PERFORMED BY</b>	<b>Pancreas</b>
Jenn	The base and limbs of the <b>pancreas</b> were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**PATIENT**

Calypso Sheridan

**ULTRASONOGRAPHIC FINDINGS**

- Structurally unremarkable abdomen with mild age related changes

**SPECIES**

Canine

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Dietary indiscretion, food intolerance, structurally insignificant inflammatory bowel or occult parasitism and occult Addison's are all potentials. Supportive care should prove effective.

**BREED**

Chihuahua

**SEX**

Neutered Male

**AGE**

13 Years

**WEIGHT**

10.4 Pounds

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Jenn

**HOSPITAL NAME**
