

PATIENT

Roger Friends of Randolph

PRESENTING CLINICAL SIGNS

unable to urinate or defecate on his own. concern for primary GI vs neurologic dz. Current meds Cisapride, lactulose, bethanacol, prazocin

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

BREED

Domestic Shorthair

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

SEX

Neutered male

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 4.48 cm. The right kidney measured 4.3 cm.

AGE

1 ½ years

WEIGHT

6.8 lbs

Adrenal Glands

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

INTERPRETED BY

Eric Lindquist, DMV DABVP, Cert. IVUSS

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

IMAGING PERFORMED BY

Jenn

HOSPITAL NAME

Rockaway AH

Liver

The **liver** revealed coarse architecture with increased portal markings. The gallbladder wall was slightly echogenic. The patient likely has a history of cholangitis.

REFERRING VET

Dr. Manier

INVOICE

94827

Gastrointestinal

The stomach was filled with soft shadowing material. This is likely hair accumulation or post prandial presentation. Transit of chyme into the small intestine was unremarkable. The descending colon was unremarkable. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

DATE

12/22/21

PATIENT

Pancreas

Roger Friends of Randolph

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

SPECIES

Feline

ULTRASONOGRAPHIC FINDINGS

BREED

Minor hepatic remodeling. History of cholangitis is likely.

Domestic Shorthair

Hair or similar material in the stomach.

Structurally normal GI tract.

SEX

Neutered male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

Supportive care should prove effective.

1 ½ years

WEIGHT

6.8 lbs
