

PATIENT

Llama Hart

SPECIES

Canine

BREED

Lhasa Apso

SEX

Neutered male

AGE

7 years

WEIGHT

28.3 lbs

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Kathleen Laux

HOSPITAL NAME

Rondout Valley
Veterinary Associates

REFERRING VET

Dr. Laux

INVOICE

69745

DATE

12/31/25

PRESENTING CLINICAL SIGNS

History: Has a long involved history of IMHA and prednisolone use. Previous gallbladder attack as well. Being weaned off pred again and is not eating well. Currently getting prednisolone 2.5mg EOD. Liver enzymes are elevated again. Looking to see if having a gallbladder issue that is contributing to loss of appetite.

Abnormal PE/Chem/CBC/UA Results: ALT 454, Alk P 286

ULTRASONOGRAPHIC EXAMINATION

The **liver** was diffusely hyperechoic to the falciform fat. The hepatic pattern is most consistent with cortisone induced hepatopathy. Minor adhered gallbladder debris was noted, yet not overtly pathological. The common bile duct was unremarkable.

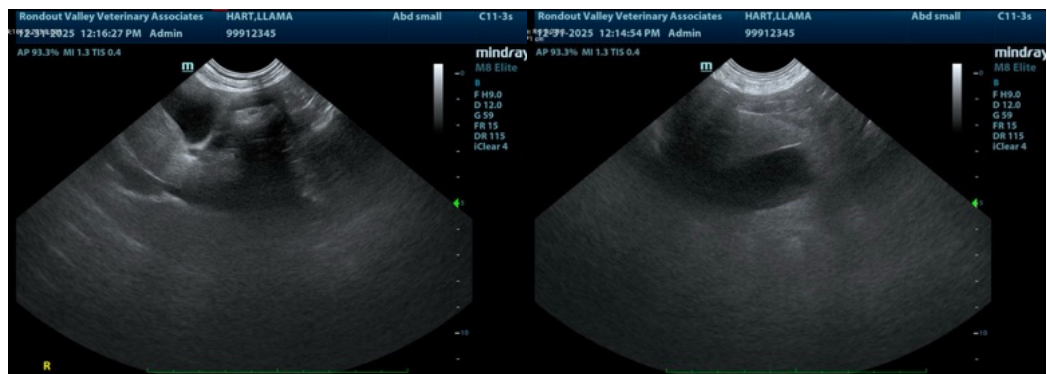

The visible **pylorus** was unremarkable.

ULTRASONOGRAPHIC FINDINGS

Cortisone induced hepatopathy, not overtly pathological.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The changes are expected for type of treatment protocol.
