

## PATIENT

Momo Porter

## SPECIES

Feline

## BREED

Maine Coon Mix

## SEX

Neutered Male

## AGE

6 Years

## WEIGHT

20 pounds

## INTERPRETED BY

Eric Lindquist, DMV,  
DABVP(CFM), Cert.  
IVUSS

## IMAGING PERFORMED BY

Jenn

## HOSPITAL NAME

Rockaway Animal  
Hospital

## REFERRING VET

Dr. Maniar

## INVOICE

12549

## DATE

12/04/25

## PRESENTING CLINICAL SIGNS

Re check from 12/2 Doing well but has not vomited hairball or had hair in stool

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### Urinary System

The **urinary bladder**, trigone, and pelvic urethra (to a depth of 2.0 cm) presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized, and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 4.58 cm in length. The right kidney measured 4.09 cm in length.

### Adrenal Glands

The regions of the **adrenal glands** were imaged with no evident pathology.

### Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

### Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion.

Duplicated gallbladder was noted yet not pathological.

### Gastrointestinal

The **stomach** revealed progressively shadowing material consistent with dense hairball accumulation. This may necessitate surgery for removal as strong shadowing was present. The gastric wall appeared unremarkable. Structurally, the small intestine and colon were unremarkable.

### Pancreas

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

## ULTRASONOGRAPHIC FINDINGS

- Duplicated gallbladder- not pathological.

**PATIENT**

Momo Porter

**SPECIES**

Feline

**BREED**

Maine Coon Mix

**SEX**

Neutered Male

**AGE**

6 Years

**WEIGHT**

20 pounds

**DATE**

12/04/25

- Dense hairball density in the stomach.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Medical management could be considered with aggressive oral medication for hairball dissolution and recheck sonogram in one week, however, surgical intervention, evacuation and GI biopsies may be necessary in this patient.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.
