

**PATIENT**

Coco Barrett

**PRESENTING CLINICAL SIGNS**

History: intestinal fb, back pain mammary swelling

**SPECIES**

Canine

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

**BREED**

Pitbull

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

**SEX**

Spayed female

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The left kidney revealed mild cortical collapse. The right kidney measured 5.8 cm. The left kidney measured 6.13 cm.

**AGE**

3 years

**WEIGHT**

52 lbs

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 2.5 x 0.55 cm at the caudal pole and 0.72 cm at the cranial pole. The left adrenal gland measured 2.23 x 0.41 cm at the caudal pole and 0.47 cm at the cranial pole.

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Jenn

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

**HOSPITAL NAME**

Rockaway AH

**Liver**

**REFERRING VET**

Dr. Maniar

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**INVOICE**

42874

**DATE**

12/6/22

**PATIENT**

**Gastrointestinal**

Coco Barrett

A 2.4 cm linear, non-obstructive structure was present in the **stomach** in multiple views. This is consistent with wood or metal material. The small intestine and colon were unremarkable.

**SPECIES**

Canine

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**BREED**

Pitbull

**SEX**

Spayed female

**ULTRASONOGRAPHIC FINDINGS**

Slight irregular left kidney with slight cortical collapse. This may be a normal variant.

Non-obstructive gastric foreign body.

**AGE**

3 years

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Endoscopy is indicated. This should be retrievable or gastrotomy; however, prior to the procedure a recheck ultrasound is recommended to ensure that material is persistently present. Otherwise, unremarkable abdomen.
