

IMAGING PERFORMED BY

IntraPet.com

DATE

2/15/23

PRESENTING CLINICAL SIGNS

Elevation of PTH is inappropriately increased with elevated calcium

PATIENT

Allie McCall

Current Medications: k/d.

Lab Results: PTH 32.5 (1.1- 10.6), ionized calcium 1.82 (1.25- 1.45), sdma 22, urine sg 1008

Date of Previous IntraPet Ultrasound: No previous.

Sedation: IV Torb.

Stat Report: Not requested.

Imaging Performed By: Rachel Brillhart, RDMS.

SPECIES

Canine

ULTRASONOGRAPHIC EXAMINATION OF THE THYROID

The left thyroid lobe revealed a 1.0 cm x 0.64 cm hypoechoic expansive nodule, consistent with parathyroid adenoma. Both thyroid lobes presented a minor amount of remodeling. The right thyroid lobe measured 2.02 cm x 0.51 cm. The left thyroid lobe measured 2.81 cm x 0.62 cm. Regional tissues were unremarkable including salivary glands, regional lymph nodes, esophagus, and trachea.

ULTRASONOGRAPHIC FINDINGS

- Left parathyroid adenomatous lesion

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Surgical resection of the left presumed parathyroid adenoma recommended. This is at the mid body, consistent with medial parathyroid.

Chest Radiographs: Unremarkable.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
