**DATE**

2/15/23

**PRESENTING CLINICAL SIGNS**

History: Cat stopped eating days ago, has lost a lot of weight, Went to another animal hospital, very anemic, poss fluid in lungs

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

The **kidneys** revealed moderate degenerative changes with multiple, corticomedullary calculi that were non-obstructive. Adjacent infarcts were noted. The kidneys revealed an interstitial nephrosis pattern. The left kidney measured 3.96 cm. The right kidney measured 3.9 cm.

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

**Liver**

The **liver** images from right and left intercostal as well as subcostal views revealed subjectively normal liver size, contour, and structure. Some age-related parenchymal remodeling was noted but likely not clinically significant at this time. Hepatic vein dilation was noted. The vena cava measured 0.7 cm at the diaphragm. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident. Pleural effusion noted through the diaphragm.

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**ULTRASONOGRAPHIC EXAMINATION OF THE HEART**

The echocardiogram in this patient presented a moderate amount of pericardial effusion with fairly normal **left atrial** size. The septal and free wall thicknesses were fairly unremarkable and within normal limits. Pericardial effusion measured 1.1 cm in maximum width. The right auricle was not collapsed. Therefore, no tamponade effect was noted. The contractility and internal volumes of the heart appeared to be adequate. There was a large amount of pleural effusion with areas of lung consolidation.

FELINE CARDIAC PARAMETERS	BODY WEIGHT	HR (BPM)	IVSd (cm)	LVIDd (cm)	LVWd (cm)	FS (%)	EF (%)

**ULTRASONOGRAPHIC FINDINGS**

Geriatric abdomen with dystrophic renal changes.

Suspect thoracic neoplasia involving pleural and pericardial space with irregular lung.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Pleurocentesis and cytospin is recommended in this patient. Ultrasound-guided pericardiocentesis can be considered with some risk; however, cytospin of the pleural effusion should prove diagnostic. Chest CT would be ideal to assess for suspected neoplastic manifestation. Pleurocentesis should be done prior to CT.
