

PATIENT

Honey Ledeaux

PRESENTING CLINICAL SIGNS

Heart murmur noted on exam. If anesthesia were to be needed, looking for a recommended protocol.
Abnormal PE/Chem/CBC/UA Results: PE: BCS 7/9, Grade 2/6 systolic murmur.

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE HEART

BREED

Domestic Shorthair

The echocardiogram in this patient demonstrated normal **left atrial** size based on 3 separate LA measurements. **Mitral** insufficiency was noted with moderate eccentric jet. The **left ventricle** presented normal thicknesses with linear contour and was not dilated nor restricted. The **myocardium** presented normal echogenicity without subjective evidence of significant fibrotic or ischemic disease. **Contractility** of the ventricular walls was adequate and in normal range for this patient evidenced by the fractional shortening measurement and subjective evaluation of the different regions and angles of the myocardium. The **left ventricular outflow** tract demonstrated normal laminar flow and subjective structural integrity. The **right atrium** and auricle revealed normal size, structure and content. No evidence of masses was noted or chamber overload. **Tricuspid** valvular assessment demonstrated adequate linear morphology and kinetics. The **right ventricle** was of normal size (1/3 diameter of LV), chordae structure, myocardial echogenicity and thickness. **Pulmonic** tract assessment revealed normal valve structure, laminar flow, and diameter (approx. 1:1 pa/ao ratio). No visible **pericardial** or free pleura fluid was noted or extra cardiac pathology in the visible planes. The cranial **mediastinum** and **pericardial regions** were free of masses in the visible window.

SEX

Spayed Female

AGE

9 years

WEIGHT

13 lbs

ULTRASONOGRAPHIC FINDINGS

Normal echocardiogram with mitral insufficiency, well compensated.

SPECIES

Feline

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No specific therapy is recommended. Recheck echocardiogram is recommended in 6 months or earlier if murmur grade increases or clinical signs initiate. The patient should not have any clinical signs related to cardiac disease at this time. I recommend thyroid assessment if not already performed.
