**DATE**

2/27/23

**PRESENTING CLINICAL SIGNS**

Pregnancy ultrasound- pet is 28 days post breeding.  
Current Medications: none listed.  
Lab Results: See attached.

**PATIENT**

Bridgett Longmire

Date of Previous IntraPet Ultrasound: No previous.  
Sedation: Not required to complete full diagnostic ultrasound.  
Stat Report: Not requested.  
Imaging Performed By: Rachel Brillhart, RDMS.

**SPECIES**

Canine

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

**BREED**

Boston Terrier

**SEX**

Intact female

The right ovary measured 1.22 x 1.01 cm. The left ovary measured 1.07 x 0.66 cm. Approximately 3 fetuses were visualized in this patient. Two fetuses were noted in the left horn and one fetus was noted in the right horn. The caudal most fetus in this patient revealed mildly thickened fetal sac with anechoic fluid. No visible heartbeat was noted. The fetus further cranial in the left horn and the fetus in the right horn appeared to have normal heart beats.

**AGE**

7/18/20

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.3 cm. The left kidney measured 4.3 cm.

**WEIGHT**

18.7 lbs

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**ULTRASONOGRAPHIC FINDINGS**

Positive pregnancy.

**HOSPITAL NAME**

Bayside AMC

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Three fetuses, at least 2 viable. Questionable viability of one fetus in the left caudal horn. Recheck sonogram is recommended in one week to assess the viability of the fetuses. Assessment for any vaginal discharge is warranted. The fetal age would be consistent with 28 days. The remainder of the uterus appeared unremarkable.

**REFERRING VET**

Dr. Buchanan

**INVOICE**

42996

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
