

**PATIENT**

Donnie Dietz

**PRESENTING CLINICAL SIGNS**

re check

**SPECIES**

Feline

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. A minor amount of suspended debris was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

**BREED**

DSH

The **kidneys** presented age related changes, similar to the prior sonogram. The left kidney measured 4.01 cm. The right kidney measured 4.27 cm.

**SEX**

Neutered Male

**Adrenal Glands**

The regions of the **adrenal glands** were unremarkable.

**AGE**

7 Years

**Spleen**

The **spleen** in this patient was uniform, yet volume contracted (4.0 mm in width). Hydration status should be assessed.

**WEIGHT**

15.8 Pounds

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**INTERPRETED BY**

Eric Lindquist, DMV

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Jenn

**HOSPITAL NAME**

Rockaway

**Pancreas**

The **pancreas** was slightly nebulous and mildly heterogeneous. Subxiphoid palpation is recommended to assess for pain or discomfort associated with the pancreas.

**REFERRING VET**

Dr. Maniar

**ULTRASONOGRAPHIC FINDINGS**

- Nebulous pancreas
- Age related renal changes
- Volume contracted spleen

**INVOICE**
