Cash Tift

SPECIES

Canine

BREED

Mix

SEX

Neutered male

AGE

6 years

WEIGHT

32 lbs

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Dr. Raul Casas

HOSPITAL NAME

State Avenue Vet Clinic

REFERRING VET

Dr. Casas

INVOICE

73485

DATE

3/17/26

PRESENTING CLINICAL SIGNS

- Presents for referral for prostatic ultrasound and possible sampling.
- - Inappetence: intermittent since Friday (4 days); some days no intake, today ~10 bites by hand.
- - Hyporexia: ongoing for several days.
- - Dysuria: difficulty urinating for 2–3 weeks.
- - Decreased activity: past week; prefers to sit outside, less active than baseline.
- - No defecation reported.
- - Vomiting: occurred after administration of antibiotics (ceased 5 days ago); unable to continue antibiotics due to vomiting and inappetence.
- - Polydipsia: drinking normally.
- - No current medications or supplements.
- Pending FNA and Pocket path reports

ULTRASONOGRAPHIC EXAMINATION

The **urinary bladder** was over distended with suspended debris.

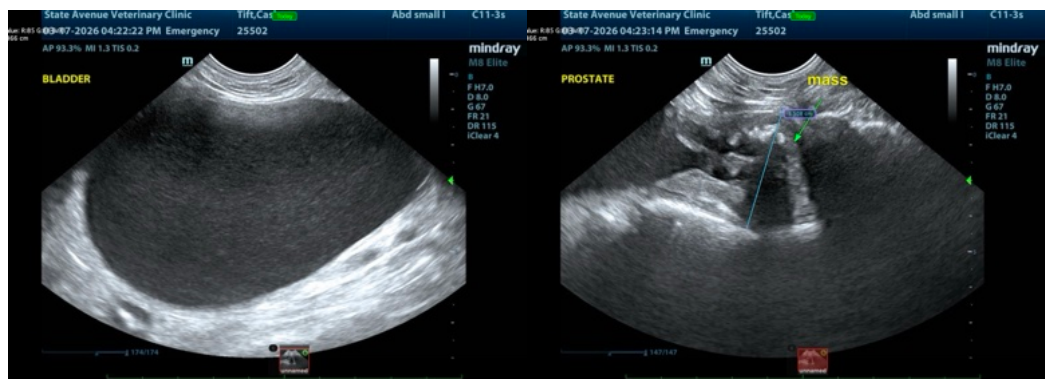

The **prostate** in this patient presented cavitated nodular and mineralized mass that measured 3.5 cm with pericapsular inflammation and proximal urethral involvement. A significant amount of mineralization was noted. This is consistent with prostatic carcinoma.

ULTRASONOGRAPHIC FINDINGS

This is strongly consistent with prostatic carcinoma.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Ultrasound-guided FNA of the parenchymal portions of the mass with drainage and culture of the cystic portions of the mass is indicated. There is a mild potential for trailing in this patient. However, ultrasound-guided traumatic catheterization could be considered as an alternative. Drainage and culture of the fluid is indicated.
