

**PATIENT**

Linguini King

**SPECIES**

Intact Female

**BREED**

Other

**SEX**

Intact Female

**AGE**

3 Years

**WEIGHT**

1.22 kgs

**INTERPRETED BY**

Eric Lindquist, DMV,  
 DABVP (CFM), Cert.  
 IVUSS

**IMAGING PERFORMED BY**

Chloe Lowe, CVT

**HOSPITAL NAME**

Martinsville VH

**REFERRING VET**

Dr. Shendell

**INVOICE**

36378

**DATE**

3/26/26

**PRESENTING CLINICAL SIGNS**

- Three month history, worsening alopecia (symmetric lumbar)
- Hyperexia
- Lethargic
- Aggressive behavior
- Left mid abdominal mass effect.

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder** revealed a trace amount of sand. Urethral sand was also noted.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex, and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.15 cm. The right kidney measured 3.07 cm.

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 0.44 cm. The left adrenal gland measured 0.27 cm.

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**PATIENT**

**Pancreas**

Linguini King

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**SPECIES**

Intact Female

**Free Abdomen**

**BREED**

The **uterus** was mildly thickened (0.84 cm).

Other

A **mass** was noted in the mid abdomen with echogenic debris, measuring 4.1 cm, and areas of mineralization. Regional inflammation was noted.

**SEX**

There was a **cystic structure** adjacent to the mass, which would suggest potential left ovarian origin.

Intact Female

**ULTRASONOGRAPHIC FINDINGS**

**AGE**

- Solitary mass in the mid caudal abdomen, suspect uterine origin (likely left uterine horn). This appears resectable.
- Cystic structure adjacent to the mass
- Bladder sand and debris

3 Years

**WEIGHT**

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

1.22 kgs

Recommend ovariohysterectomy in this patient. Cystotomy and bladder lavage are also indicated given the bladder sand and sediment. Suspect ovarian or uterine carcinoma/mass.
