

**PATIENT**

**PRESENTING CLINICAL SIGNS**

Murphy Pickering

Acute onset swelling of neck on 4/18/22. Doctor tried to aspirate- non-diagnostic/ unremarkable. Pt likes to "rough house" with k9 sibling. O believes swelling has gone down since 4/18. No current meds. Abnormal PE/Chem/CBC/UA Results: WNL UA: low SG 1.013

**SPECIES**

Canine

**ULTRASONOGRAPHIC EXAMINATION**

**BREED**

Labrador

A 6.0 cm, undifferentiated, hypoechoic mass was noted in the cervical region. The salivary glands were unremarkable and uniform measuring 4.0 x 1.5 cm. Cellulitis pattern was noted around the mass. The mass is in position of salivary gland; however, the tissue was significantly undifferentiated. Ill-defined surrounding fat obscured visibility. Extensive cellulitis pattern was noted.

**SEX**

Neutered male

**ULTRASONOGRAPHIC FINDINGS**

Undifferentiated cervical mass, the origin could not be ascertained as significant inflammation is noted. There is a possibility that this is deriving from the thyroid; however, regional structures were obscured by enhanced surrounding fat and cellulitis pattern. Undifferentiated sarcoma or mast cell disease are significant potentials.

**AGE**

8 years

**WEIGHT**

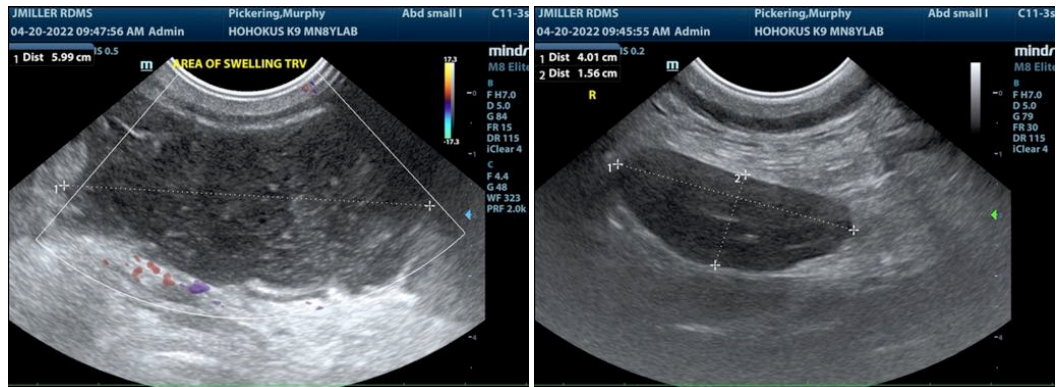

92.6 lbs

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Treatment based on cytology results are recommended. CT evaluation would be ideal. Core biopsy may be necessary if cytology is not adequately diagnostic.
