

## PATIENT

Leo Angeles

## SPECIES

Feline

## BREED

Domestic Shorthair

## SEX

Neutered male

## AGE

10 months

## WEIGHT

10.5 lbs

## INTERPRETED BY

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

## IMAGING PERFORMED BY

Kevin Moon DVM

## HOSPITAL NAME

Shiloh VH

## REFERRING VET

Dr. Herr

## INVOICE

74804

## DATE

4/24/26

## PRESENTING CLINICAL SIGNS

History: - History of recurrent sterile hematuria. CBC/Chem normal 2/21  
Abnormal PE/Chem/CBC/UA Results: Urinalysis 3/21 most recently USG 1.061 UPC 0.8 Blood 3+

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 4.1 cm. The right kidney measured 4.1 cm.

The iliac trifurcation was unremarkable.

### Adrenal Glands

The **adrenal glands** were not visualized.

### Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

### Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**PATIENT**

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. The mesenteric lymph nodes were juvenile and measured 1.0 x 0.5 cm.

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**ULTRASONOGRAPHIC FINDINGS**

Structurally unremarkable abdomen including the lower urinary tract.  
Idiopathic hematuria.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Environmental stressors and coagulopathy should be considered as well as occult UTI (less likely).
