

PATIENT

Princess Tores

PRESENTING CLINICAL SIGNS

History: Hiding not E/D

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

BREED

Domestic Shorthair

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

SEX

Female

The **kidneys** were relatively normal; however, a cortical infarct was noted in the dorsal cranial cortex of the left kidney. The right kidney measured 4.4 cm. The left kidney measured 3.8 cm.

AGE

6 years

Adrenal Glands

WEIGHT

6 lbs

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

IMAGING PERFORMED BY

Jenn

Liver

HOSPITAL NAME

Rockaway AH

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

Gastrointestinal

DATE

4/26/23

The **stomach** was over distended with echogenic fluid. This continued through the pylorus and appeared to be patent. The distal small intestine was empty and unremarkable. A shadowing small intestinal foreign body was noted in the upper duodenum impinging upon the colon which was empty.

PATIENT

Pancreas

Princess Tores

The right limb of the **pancreas** was enlarged, hypoechoic and irregular measuring 1.2 cm in width.

SPECIES

Feline

ULTRASONOGRAPHIC FINDINGS

Small intestinal obstruction.

BREED

Domestic Shorthair

Minor left renal infarct and minor degenerative changes.

SEX

Female

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Surgical intervention is warranted.
