DATE

5/11/26

PRESENTING CLINICAL SIGNS

History: Pt presented for an abdominal ultrasound due to upper GI issues for the past 7-10 days. Pt had analsaculectomy approx 3 weeks ago. Mass came back as adenocarcinoma with margins. Pt has decreased energy, vomiting and decreased appetite. No C/S. CBC/Chem/CPL unremarkable with the exception of a slightly elevated ALT.

ULTRASONOGRAPHIC EXAMINATION OF THE HEART

8 efficiency video clips from SDEP protocol provided.

All four chambers revealed normal volumes and contractility. No pericardial or pleural effusion noted. No gross abnormalities that would preclude anesthesia.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Anesthetic risk is considered normal to mild: No gross abnormalities noted on SDEP^R Screening Echo to contraindicate anesthesia. Minimal to no left atrial enlargement noted on images presented.

1. However, judicious fluid administration is advised with careful RR/RE monitoring to screen for fluid overload.
2. Monitoring of blood pressure, SpO₂, CO₂, and auscultation of heart and lungs during anesthesia should be done during every procedure.
