

**PATIENT PRESENTING CLINICAL SIGNS**

Obi Vogel hyper albuminuria sig hematuria lethargy acute onset

**SPECIES ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

Canine **Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal. The residual prostate measured 5.0 mm. The pelvic urethra was imaged 2.0 cm beyond the cystourethral junction.

**BREED**

French Bulldog

**SEX**

Neutered Male

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.32 cm. The left kidney measured 4.6 cm.

**AGE**

2 Years

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 2.02 cm x 0.73 cm at the cranial pole and 0.52 cm at the caudal pole. The left adrenal gland measured 1.29 cm x 0.43 cm at the caudal pole and 0.38 cm at the cranial pole.

**WEIGHT**

21 Pounds

**INTERPRETED BY Spleen**

Eric Lindquist, DMV

DABVP, Cert. IVUSS

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**IMAGING PERFORMED BY**

Jenn

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**HOSPITAL NAME**

Rockaway AH

**REFERRING VET**

Dr. Maniar

**Gastrointestinal**

Minor retention of ingesta noted in the **stomach**. The small intestine and colon were unremarkable.

**INVOICE**

37653

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**DATE**

5/16/22

**PATIENT**

Obi Vogel

**ULTRASONOGRAPHIC FINDINGS**

- Structurally unremarkable abdomen

**SPECIES**

Canine

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The cause of hematuria and lethargy is unclear. Screening for Addison's warranted. Full urinalysis warranted to assess for evidence of UTI, yet structurally the abdomen was unremarkable.
