

PATIENT PRESENTING CLINICAL SIGNS

Stache Whitmill pale pink mm's, abd slightly tense on palpation, BCS 3/9, all else wnl (oral exam wnl) Primary Question/Differential to Be Answered in This Exam cause for chronic vomiting and significant weight loss

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

BREED *Urinary System*

DSH

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

SEX

Neutered Male

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 3.7 cm. The right kidney measured 4.14 cm. Hyperechoic medullary rim sign noted in both kidneys.

AGE

1 Year

WEIGHT

7 Pounds

Adrenal Glands

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The left adrenal gland measured 0.34 cm. The right adrenal gland measured 0.47 cm.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

IMAGING PERFORMED BY

Jenna Walsh, CVT

Liver

The **liver** was mildly swollen and slightly hypoechoic to surrounding fat. Slight free fluid noted between the liver lobes. The gallbladder was unremarkable.

HOSPITAL NAME

VCA Westmoreland

REFERRING VET

Dr. Bugarovich

Gastrointestinal

The **stomach** and pyloric outflow comprised a mass measuring approximately 5.0 cm. The mass encompassed the majority of the stomach and entered into the gastroesophageal inlet. The small intestine and colon were unremarkable.

INVOICE

37770

Pancreas

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.
