

PATIENT

Holmes Dikengil

PRESENTING CLINICAL SIGNS

re check renal stats improved BUN CReat

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

BREED

DSH

SEX

Neutered Male

The **right kidney** was subnormal in size with increased cortical echogenicity. The right kidney measured 2.37 cm. The **left kidney** presented an interstitial nephrosis pattern and measured 4.41 cm. Similar to prior sonogram. Blood flow to the kidneys appeared to be subnormal.

AGE

13 Years

Adrenal Glands

The regions of the **adrenal glands** were unremarkable.

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

WEIGHT

10 Pounds

INTERPRETED BY

Eric Lindquist, DMV

DABVP, Cert. IVUSS

Liver

Persistent parenchymal cyst noted in the **liver** with moderate remodeling. The gallbladder was unremarkable.

IMAGING PERFORMED BY

Jenn

Gastrointestinal

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

HOSPITAL NAME

Rockaway AH

Pancreas

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

ULTRASONOGRAPHIC FINDINGS

INVOICE

37884

- Subjective end stage persistent interstitial nephrosis pattern
- Hepatic remodeling with benign cysts, similar to prior sonogram

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE

5/23/22

Prognosis is based on responsiveness therapy and maintenance of renal values within functional range.
