Nikko Quant

PRESENTING CLINICAL SIGNS

re check eating excessively at home no V/D

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

BREED

DSH

The **left kidney** was severely dystrophic, subnormal in size, and fibrotic, measuring 2.38 cm. The **right kidney** presented a chronic interstitial nephrosis pattern and measured 3.0 cm with loss of structural detail.

SEX

Neutered Male

Adrenal Glands

AGE

12 Years

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

WEIGHT

13 Pounds

INTERPRETED BY

Eric Lindquist, DMV

DABVP, Cert. IVUSS

Liver

The right cranial liver revealed a complex cystadenoma type mass with capsular expansion and deviation of the diaphragm. The remainder of the liver was unremarkable. The gallbladder was unremarkable.

IMAGING PERFORMED BY

Jenn

Gastrointestinal

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

HOSPITAL NAME

Rockaway AH

Pancreas

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

ULTRASONOGRAPHIC FINDINGS

INVOICE

37927

- Large cystadenoma liver mass – possible biliary carcinoma, non-resectable.
- End stage degenerative left kidney, moderate degenerative right renal changes

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

DATE

5/25/22

Evaluation of renal function indicated in this patient. Prognosis is guarded long-term. The kidneys appear approximately 50-60% compromised.
