

PATIENT

Evie Maurer

PRESENTING CLINICAL SIGNS

vomited several times, decreased appetite weight loss

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

BREED

DSH

SEX

Spayed Female

The **kidneys** presented chronic end stage interstitial nephrosis pattern. The left kidney measured 2.83 cm. The right kidney measured 2.94 cm. Cortical infarcts, loss of corticomedullary definition and echogenic remodeling noted in both kidneys. Blood flow was subnormal on power doppler assessment.

AGE

11 Years

Adrenal Glands

The regions of the **adrenal glands** were unremarkable.

Spleen

WEIGHT

7.6 Pounds

The **spleen** in this patient was uniform, yet volume contracted. Hydration status should be assessed.

Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Jenn

Gastrointestinal

Minor fluid accumulation noted in the **gastric** lumen, yet structurally the GI tract was unremarkable. The small intestine and colon were unremarkable.

HOSPITAL NAME

Rockaway AH

Pancreas

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

REFERRING VET

Dr. Maniar

ULTRASONOGRAPHIC FINDINGS

- End stage degenerative renal disease
- Volume contracted spleen
- Unremarkable abdomen otherwise
