

PATIENT

Coco Sabatini

PRESENTING CLINICAL SIGNS

Vomiting, stomach full with no motility.

SPECIES

Feline

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The **urinary bladder** was overdistended, yet no overt obstruction noted.

BREED

DSH

The **kidneys** presented normal size with slight irregular contour. Minor pyelectasia noted, likely owing to full bladder and renal pelvic pressure. The right kidney measured 4.88 cm. The left kidney measured 4.8 cm.

SEX

Neutered Male

Adrenal Glands

The regions of the **adrenal glands** were unremarkable.

Spleen

AGE

3 Years

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

WEIGHT

19 Pounds

Liver

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

INTERPRETED BY

Eric Lindquist, DMV

DABVP, Cert. IVUSS

Gastrointestinal

The **stomach** presented a minor amount of shadowing material and stasis, likely hairball accumulation and ingesta. The small intestine and colon were unremarkable.

IMAGING PERFORMED BY

Eric Lindquist, DMV

DABVP, Cert. IVUSS

Pancreas

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

HOSPITAL NAME

Rockaway AH

ULTRASONOGRAPHIC FINDINGS

REFERRING VET

Dr. Maniar

- Minor hairball density in the stomach
- Slight irregular kidney contour

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

38619

Hairball therapy indicated and possible diet change.
