

PATIENT PRESENTING CLINICAL SIGNS

PATIENT Maya Ariki
SPECIES Canine
BREED Blue Heeler
SEX Spayed female
AGE 9 years
WEIGHT 32 lbs

History: No issues other than recurrent anal gland fill and inflammation. Murmur discovered in 12/2021.
 Abnormal PE/Chem/CBC/UA Results: PE: Systolic murmur, heart base, valvular click, II/VI. Lense sclerosis as expected. Remainder is normal. No recent labs.

ULTRASONOGRAPHIC EXAMINATION OF THE HEART

The echocardiogram in this patient demonstrated normal **left atrial** size based on 3 separate methods of LA evaluation. The cranial and caudal **mitral** valve leaflets presented normal linear structure, extension in systole, and union in diastole with normal kinesis. The **left ventricle** presented thicknesses with linear contour and was not dilated nor restricted. The **myocardium** presented normal echogenicity without subjective evidence of significant fibrotic or ischemic disease. **Contractility** of the ventricular walls was adequate and in normal range for this patient evidenced by the fractional shortening measurement and subjective evaluation of the different regions of the myocardium. Increased **left ventricular outflow** tract velocity was noted. The **right atrium** and auricle revealed normal size, structure and content. No evidence of masses was noted. **Tricuspid** valvular assessment demonstrated adequate linear morphology and kinesis. The **right ventricle** was of normal size (1/3 diameter of LV), chordae structure, myocardial echogenicity and thickness. **Pulmonary outflow** tract assessment revealed normal valve structure, laminar flow, and diameter (approx. 1:1 pa/ao ratio). No visible **pericardial** or free pleura fluid was noted. The cranial **mediastinum and pericardial and extra-cardiac regions** were free of masses in the visible window.

ULTRASONOGRAPHIC FINDINGS

Minor, increased LVOT velocity, this may represent a hyperdynamic state, yet no evidence of structural disease.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

PATIENT

Maya Ariki

Blood pressure measurements are warranted. There is no contraindication to anesthetic procedure. No therapy is indicated.
