**PRESENTING CLINICAL SIGNS**

History: PERTINENT CLINICAL HISTORY: Hypercalcemic secondary to hyperparathyroidism  
LEADING DIFFERENTIAL/DIAGNOSIS: Looking for parathyroid tumor

**ULTRASONOGRAPHIC EXAMINATION OF THE THYROID**

The left thyroid lobe was imaged and measured 2.12 x 0.4 cm. The medial aspect of the left thyroid lobe revealed a hypoechoic, undifferentiated 0.4 x 0.6 cm expansive nodule. This is consistent with parathyroid adenoma. The right thyroid lobe was uniform and measured 1.47 x 0.4 cm. The esophagus, trachea and vasculature all appeared normal in the visible planes as did the larynx. The parathyroid adenoma was visible on long and short axis. The salivary glands and fascial planes were normal.

**ULTRASONOGRAPHIC FINDINGS**

Left parathyroid adenoma.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Surgical intervention is recommended.
