**DATE**

7/10/22

**PRESENTING CLINICAL SIGNS**

Presented at our hospital for shaking and painful ; seen at Rossmoyne 7/8 Previous Health Concerns: cpl negative, liver panel normal Current Medications/Supplements/OTC: cerenia injection on gabapentin

Abnormal PE/Chem/CBC/UA Results: Abdominal: very painful especially cranial abdomen Full blood work ; Glob 3.8; GGT 17; MCHC 38.2; RDW-CV 12.1; HELA negative Rad; large amount of gas stomach and small bowel and colon

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal. The pelvic urethra was imaged 1.0 cm beyond the cystourethral junction.

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.57 cm. The left kidney measured 4.57 cm. Slight pyelectasia noted and slight ill-defined medullary rim sign on both kidneys. This is a breed specific issue. However, assessment for proteinuria indicated. Blood flow to the kidneys appeared to be adequate.

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The left adrenal gland measured 0.60 cm.

**Spleen**

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**Liver**

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**PATIENT**

**Pancreas**

Isaac Alcoser

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**SPECIES**

Canine

**PRIMARY FINDINGS**

- Structurally unremarkable abdomen with minor idiopathic medullary rim kidneys

**BREED**

Shih Tzu

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No evidence of clinical visceral pathology. Given the patient history, spinal disease or other source of pain should be considered, as there is no evidence of visceral pathology noted that would be responsible for the clinical signs.

**SEX**

Neutered Male

**AGE**
