

PATIENT	PRESENTING CLINICAL SIGNS
Chayenne Van Hise	History: Vomiting bloody fetid diarrhea UTD on vaccines per O. CTO and LMOM at 11:39 am- asked for call back
SPECIES	Abnormal PE/Chem/CBC/UA Results: CBC- HCT 55.7%, EOS 0.05, PLT 84 CHEM 10- GLU 153, CA 7.5, NA 143, CI 105, LAC 4.12, EPOC- 86.3 (normal) manual PLT count- 70.500, no clumps seen in feathered edge. FECAL to antech (in house cytology showed no fluke eggs)
Canine	
BREED	ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN
Chihuahua Mix	Urinary System
SEX	The urinary bladder , trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized, and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.
Spayed Female	
AGE	The kidneys revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 5.0 cm. The left kidney measured 5.0 cm.
5 Years	
WEIGHT	Adrenal Glands
14.6 Pounds	The adrenal glands were not visualized.
INTERPRETED BY	Spleen
Eric Lindquist, DMV DABVP, Cert. IVUSS	The spleen presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.
IMAGING PERFORMED BY	Liver
TM	The liver images from right and left intercostal as well as subcostal views revealed subjectively normal liver size, contour, and structure. Some minor age-related parenchymal remodeling was noted but likely not clinically significant at this time. Vascular and biliary tracts were of normal volume and no evidence of congestion was noted. The gallbladder presented some dependent debris with essentially normal contour. The cystic and common bile ducts were normal. No overt evidence of active inflammatory, infiltrative or regenerative pathology was noted but should be paired with current or past LE elevations regarding any clinical significance to this presentation. The hepatic lymph nodes were unremarkable.
HOSPITAL NAME	
Willamette VH	
REFERRING VET	
Tessa Maggiulli	
INVOICE	Gastrointestinal
16597	The gastrointestinal tract structurally unremarkable with empty lumen with minor small intestinal wall thickening and fluid filled colon. Reactive mesentery was present.
DATE	Pancreas
7/12/22	

PATIENT

Chayenne Van Hise

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

SPECIES

Canine

ULTRASONOGRAPHIC FINDINGS

- Enteritis/colitis pattern
- Unremarkable abdomen otherwise

BREED

Chihuahua Mix

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Supportive care and treatment for enterotoxin, parasites and dietary intolerance all possible.

SEX

Spayed Female

AGE
