

**PATIENT**

Penny Ferrone

**PRESENTING CLINICAL SIGNS**

History: re check prev u/s on 7/6

**SPECIES**

Feline

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**BREED**

DSH

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

**SEX**

Spayed Female

The **kidneys** revealed largely normal size and structure, corticomedullary definition and ratio (cortex 1/3 of medulla) were essentially maintained with some mild age-related loss of curvilinear patterns regarding the capsule and C/M junction. The cortices presented largely uniform texture with some increased echogenicity expected for his age patient. Medullary structure differed distinctly from that of the cortex and no evidence of pelvic dilation was present. The left kidney measured 4.07 cm. The right kidney measured 3.76 cm.

**AGE**

8 Years

**Adrenal Glands**

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

**WEIGHT**

10.8 Pounds

**Spleen**

The **spleen** in this patient was uniform, yet volume contracted. Hydration status should be assessed.

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

**Liver**

The **liver** revealed coarse architecture and mild increased portal markings. The gallbladder wall was slightly echogenic.

**IMAGING PERFORMED BY**

Jenn

**Gastrointestinal**

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**HOSPITAL NAME**

Rockaway AH

**Pancreas**

The **pancreas** revealed minor heterogeneous parenchymal changes yet appears stable.

**REFERRING VET**

Dr. Maniar

**ULTRASONOGRAPHIC FINDINGS**

**INVOICE**

- Normal geriatric abdomen- stable

16613

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No residual pathology.
