

PATIENT

PRESENTING CLINICAL SIGNS

Winter Ferrari

History: ADR, lethargic. Intermit will cry when picked up. Ortho exam WNL. Eating/drinking WNL. No vomiting or diarrhea. Pancreatic enzymes WNL

SPECIES

Abnormal PE/Chem/CBC/UA Results: RBC: 7.9, HCT: 48, TP: 8.4, ALB: 4.5, ALT; 160, TBili: 2

Canine

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

BREED

Urinary System

Poodle Mix

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal. The pelvic urethra was imaged 2.0 cm beyond the cystourethral junction.

SEX

Neutered

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 4.68 cm. The right kidney measured 5.1 cm.

AGE

7.8 Years

Adrenal Glands

WEIGHT

26 Pounds

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 2.18 cm x 0.53 cm. The left adrenal gland measured 2.25 cm x 0.66 cm.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

IMAGING PERFORMED BY

A.Rodriguez

Liver

HOSPITAL NAME

Foxfield VS

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

REFERRING VET

A.Rodriguez

Gastrointestinal

INVOICE

23346

There was some residual chyme and gas was noted in the **stomach**, yet not pathological. This is consistent with end post prandial presentation. Transit of chyme into the small intestine was normal. Curvilinear patterns were maintained throughout the GI tract. No evidence of pathology. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

DATE

7/14/23

PATIENT

Pancreas

Winter Ferrari

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

SPECIES

Canine

ULTRASONOGRAPHIC FINDINGS

- Structurally unremarkable abdomen- no evidence of pathology
- Partially full stomach

BREED

Poodle Mix

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

SEX

I recommend reassessing the bilirubin value in this patient, as it may be artifactual. If liver enzymes remain elevated, FNA is indicated. There is no evidence of visceral disease directly responsible for the clinical signs. Consideration for orthopedic pain/back pain would be warranted given the patient history.
