

**PATIENT**

Spunky Dikengil

**PRESENTING CLINICAL SIGNS**

re check had prev u/s on 7/18 check splenomegaly

**SPECIES**

Feline

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

**BREED**

DSH

**SEX**

Spayed Female

The **kidneys** revealed largely normal size and structure, corticomedullary definition and ratio (cortex 1/3 of medulla) were essentially maintained with some age-related loss of curvilinear patterns regarding the capsule and C/M junction. The cortices presented largely uniform texture with some increased echogenicity expected for his age patient. Medullary structure differed distinctly from that of the cortex and no evidence of pelvic dilation was present. Similar to prior sonogram. The left kidney measured 4.3 cm. The right kidney measured 4.3 cm.

**AGE**

12 Years

**Adrenal Glands**

The regions of the **adrenal glands** were unremarkable.

**WEIGHT**

7.9 Pounds

**Spleen**

The **spleen** has returned to normal size at 7.0 mm, uniform.

**Liver**

The **liver** images from right and left intercostal as well as subcostal views revealed subjectively normal liver size, contour, and structure. Some age-related parenchymal remodeling was noted but likely not clinically significant at this time. Vascular and biliary tracts were of normal volume and no evidence of congestion was noted. The gallbladder presented some dependent debris with essentially normal contour. The cystic and common bile ducts were normal. No overt evidence of active inflammatory, infiltrative or regenerative pathology was noted but should be paired with current or past LE elevations regarding any clinical significance to this presentation. The hepatic lymph nodes were unremarkable.

**INTERPRETED BY**

Eric Lindquist, DMV

DABVP, Cert. IVUSS

**IMAGING PERFORMED BY**

Jenn

**Gastrointestinal**

**HOSPITAL NAME**

Rockaway AH

The **stomach** itself was unremarkable. Minor intestinal thickening noted. The ileocecal junction revealed minor cecal stasis.

**Pancreas**

**REFERRING VET**

Dr. Maniar

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**INVOICE**

39689

**PRIMARY FINDINGS**

- Normalized spleen
- Minor intestinal thickening

**DATE**

7/20/22

**SECONDARY FINDINGS**

- Age related renal and hepatic changes

**PATIENT**

Spunky Dikengil

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

If the patient is non-clinical, no further treatment recommended.
