

**PATIENT PRESENTING CLINICAL SIGNS**

**Bumi Ortiz** O' describes him not being himself and protecting his abdomen. PE, radiographs were unremarkable. Bloodwork as well except for mildly increased Globulin. EDUD well.

**SPECIES**

Feline

Abnormal PE/Chem/CBC/UA Results: Sunday CBC (7/16/23) the GLOB was 5.5 g/dL Today's CBC the GLOB was 5.6 g/dL

**BREED**

DSH

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

**SEX**

Neutered Male

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes were noted. Ureteral papillae were normal.

**AGE**

4 Years

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The right kidney measured 4.33 cm. The left kidney measured 3.6 cm.

**WEIGHT**

13 Pounds

**Adrenal Glands**

**INTERPRETED BY**

Eric Lindquist, DMV

The regions of the **adrenal glands** were unremarkable.

DABVP, Cert. IVUSS

**Spleen**

**IMAGING PERFORMED BY**

Dr. Yaniris Alvarado

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**HOSPITAL NAME**

Ramey Vet Hospital

**Liver**

**REFERRING VET**

Dr. Yaniris Alvarado

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**INVOICE**

44253

**Gastrointestinal**

**DATE**

7/21/23

There was some residual chyme and gas was noted in the **stomach**, yet not pathological. This is consistent with end post prandial presentation. Transit of chyme into the small intestine was normal. Curvilinear patterns were maintained throughout the GI tract. No evidence of pathology. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**PATIENT** *Pancreas*

Bumi Ortiz The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**SPECIES**

Feline

**ULTRASONOGRAPHIC FINDINGS**

**BREED**

- Structurally unremarkable abdomen

DSH

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

No evidence of pathology. Given the globulin elevation, protein electrophoresis would be ideal.

**SEX**

Neutered Male
