

PATIENT PRESENTING CLINICAL SIGNS

Betty Heys Suspect foreign object in throat area, is decreasing in size with medications
Abnormal PE/Chem/CBC/UA Results: Current Medications Clavamox and Carprofen

SPECIES ULTRASONOGRAPHIC EXAMINATION OF THE CERVICAL REGION

Canine

BREED

Pointing Griffon

Multiple cervical images submitted. The trachea appeared unremarkable. However, in the right cervical region, midpoint between the shoulder and jaw line, there is a 1.5-1.8 cm shadowing foreign body, possible escape from the esophagus, given that the esophagus was adjacent to the structure. If no outer penetrating wound is noted, then this is likely the source.

SEX

Regional reactive lymph node noted measuring 2.0 cm x 1.0 cm.

Intact Female

ULTRASONOGRAPHIC FINDINGS

- Shadowing linear foreign body (1.5-1.8 cm)

AGE

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

8 Months

CT evaluation would be ideal for surgical planning. However, if the history fits with foreign body, then ultrasound guided surgical retrieval could be considered.
