

PATIENT

PRESENTING CLINICAL SIGNS

Monroe Adel

Recheck ultrasound. Currently being treated for FIP.

SPECIES

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Feline

Urinary System

BREED

The **urinary bladder**, trigone, and pelvic urethra presented normal thicknesses and normal tone. The ureters were not visible which is normal. No uroliths or sediment were visualized and anechoic urine was present. No evidence of inflammatory or neoplastic changes was noted. Ureteral papillae were normal.

Domestic Medium Hair

SEX

The **kidneys** revealed minor irregular contour and slight, hyperechoic medullary rim sign. The left kidney measured 3.88 cm. The right kidney measured 3.8 cm.

Spayed Female

AGE

Adrenal Glands

2 years

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient.

INTERPRETED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

IMAGING PERFORMED BY

Eric Lindquist, DMV
DABVP, Cert. IVUSS

Spleen

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes was noted.

HOSPITAL NAME

Franklin Lakes AH

Liver

REFERRING VET

Dr. Ward

The **liver** revealed slight, heterogenous parenchymal changes with mildly increased portal markings. The gallbladder and common bile duct were unremarkable. The hepatic lymph nodes measured 0.5 cm in width.

INVOICE

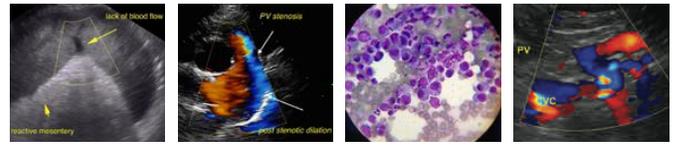

91088

Gastrointestinal

DATE

8/10/21

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. The mesenteric lymph nodes were reactive and measured 1.74 x 0.5 cm. Remodeled mesentery and other lymph node enlargement was noted.

PATIENT

Pancreas

Monroe Adel

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

SPECIES

Feline

ULTRASONOGRAPHIC FINDINGS

BREED

Significant partial remission FIP syndrome type presentation with minor mesenteric and hepatic lymphadenopathy.

Domestic Medium Hair

Mild medullary rim kidney.

SEX

Minor hepatic remodeling.

Spayed Female

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

The patient appears stable under current therapy. There was no progression from the prior sonogram.
