

**PATIENT**

Roxy Hofmann

**PRESENTING CLINICAL SIGNS**

Hematuria, stranguria. Current meds: Clavamox -started today.  
Abnormal PE/Chem/CBC/UA Results: USG 1.030, Pro 2+, RBC TNTC, few WBC's.

**SPECIES**

Canine

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

**BREED**

Newfoundland X

The **urinary bladder** presented a chronic cystitis pattern. A minimal amount of urine was present at the time of the sonogram. Wall thickness measured up to 1.5 cm. Regional inflammatory pattern noted around the urethra and trigone.

**SEX**

Spayed Female

The **kidneys** revealed normal size and structure, corticomedullary definition and ratio for this age. The cortices presented largely uniform texture with normal echogenic relationship to liver and spleen. Medullary structure differed distinctly from the cortex and no evidence of pelvic dilation was present. The capsules were acceptably uniform without significant irregularities. The left kidney measured 7.43 cm. The right kidney measured 7.79 cm.

**AGE**

9 Years

**Adrenal Glands**

**WEIGHT**

122 Pounds

Both **adrenal glands** were visualized and recognized as having normal shape, size, position and echogenicity for this breed. The phrenic vasculature, glandular echogenicity and detail were unremarkable. Capsule, cortex, and medullary definition were normal for this age patient. The right adrenal gland measured 2.48 cm x 0.99 cm at the cranial pole and 0.61 cm at the caudal pole. The left adrenal gland measured 2.2 cm x 0.51 cm at the cranial pole and 0.53 cm at the caudal pole.

**Spleen**

**INTERPRETED BY**

Eric Lindquist, DMV  
DABVP, Cert. IVUSS

The **spleen** presented a smooth homogeneous parenchyma hyperechoic to liver and renal cortical parenchyma. The capsule was smooth without noticeable expansion or deviation from within the spleen or adjacent pathology. The splenic vasculature demonstrated normal volume without signs of congestion or thrombosis. No sonographic evidence of acute or chronic inflammatory, neoplastic, or infarctual changes were noted.

**IMAGING PERFORMED BY**

Shari Reffi, CVT

**Liver**

**HOSPITAL NAME**

Newton Vet Hospital

The **liver** images submitted revealed subjectively normal liver size, contour, and structure. Parenchymal echogenicity was naturally coarse and hypoechoic to the spleen. Vascular and biliary tracts were of normal volume with no evidence of congestion. The gallbladder presented acceptably thin walls with primarily anechoic content. The cystic and common bile ducts were normal. No pathological hepatic lymphadenopathy was evident. No overt structural evidence of inflammatory, infiltrative or regenerative pathology was evident.

**REFERRING VET**

Dr. Kim

**Gastrointestinal**

**INVOICE**

24715

Examination of the **gastrointestinal tract** revealed a stomach and intestine free of stasis, of normal wall thickness, acceptable curvilinear mural detail, and peristaltic activity. Small and large intestine demonstrated normal luminal chyme and stool consistency respectively. No obstructive or overt infiltrative disease was noted. No associated abnormal lymphatic activity was noted.

**DATE**

8/16/21

**Pancreas**

The base and limbs of the **pancreas** were observed to be largely isoechoic to surrounding omental fat. Pancreatic duct and capsular contour were acceptably normal and parenchyma respected normal curvilinear patterns. No overt evidence of active inflammatory or neoplastic disease was noted.

**PATIENT**

Roxy Hofmann

**ULTRASONOGRAPHIC FINDINGS**

- Chronic cystitis pattern

**SPECIES**

Canine

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Urine culture and sensitivity warranted. 4-week antibiotic protocol warranted based on culture results ideally. No evidence of neoplasia or calculi.
